

# UAV Flight Operations for Mapping

Precision. Accuracy. Reliability

**SPATIAL  
ANALYTIX**

The logo for SPATIAL ANALYTIX features the company name in a bold, dark blue, sans-serif font. The word 'SPATIAL' is on the top line and 'ANALYTIX' is on the bottom line. An orange, stylized graphic of a globe or a network of intersecting lines is positioned behind the text, partially obscured by it.

# AGENDA

Part One:

Why is Mapping different?

Part Two:

What about accuracy and precision?

Part Three:

What is the Workflow?

Part Four:

What do the results look like?

# VISION

There are **known knowns**. These are things we know we know.

There are **known unknowns**. That is to say, there are things that we know we don't know.

But there are also **unknown unknowns**.  
*These are the things we don't know we don't know.*

Donald Rumsfeld  
(Former) Secretary of State

### *United States National Map Accuracy Standards*

With a view to the utmost economy and expedition in producing maps which fulfill not only the broad needs for standard or principal maps, but also the reasonable particular needs of individual agencies, standards of accuracy for published maps are defined as follows:

1. **Horizontal accuracy.** For maps on publication scales larger than 1:20,000, not more than 10 percent of the points tested shall be in error by more than 1/30 inch, measured on the publication scale; for maps on publication scales of 1:20,000 or smaller, 1/50 inch. These limits of accuracy shall apply in all cases to positions of well-defined points only. Well-defined points are those that are easily visible or recoverable on the ground, such as the following: monuments or markers, such as bench marks, property boundary monuments; intersections of roads, railroads, etc.; corners of large buildings or structures (or center points of small buildings); etc. In general what is well defined will be determined by what is plottable on the scale of the map within 1/100 inch. Thus while the intersection of two road or property lines meeting at right angles would come within a sensible interpretation, identification of the intersection of such lines meeting at an acute angle would obviously not be practicable within 1/100 inch. Similarly, features not identifiable upon the ground within close limits are not to be considered as test points quoted, even though their positions may be scaled closely upon the map. In timber lines, soil boundaries, etc.
2. **Vertical accuracy,** as applied to contour maps on all publication scales more than 10 percent of the elevations tested shall be in error more than the interval. In checking elevations taken from the map, the apparent vertical by assuming a horizontal displacement within the permissible horizontal scale.
3. **The accuracy of any map may be tested** by comparing the positions of or elevations are shown upon it with corresponding positions as determined by other maps of the same area. Tests shall be made by the producing agency, which shall also make maps are to be tested, and the extent of the testing.
4. **Published maps meeting these accuracy requirements** shall note this fact as follows: "This map complies with National Map accuracy Standards."
5. **Published maps whose errors exceed those aforesaid** shall omit mention of standard accuracy.
6. **When a published map is a considerable enlargement** of a map drawn on a smaller scale, that fact shall be stated in the legend. For example, "This map is an enlargement of a 1:20,000-scale map drawing," or "This map is an enlargement of a 1:24,000-scale published map."
7. **To facilitate ready interchange and use of basic information for map construction** among all Federal mapmaking agencies, manuscript maps and published maps, wherever economically feasible and consistent with the uses to which the map is to be put, shall conform to latitude and longitude boundaries, being 15 minutes of latitude and longitude, or 7.5 minutes, or 3-3/4 minutes in size.

U.S. BUREAU OF THE BUDGET

## NSSDA and NMAS

### NMAS- 1947

- ▶ Paper Map produced at a certain scale
- ▶ Not appropriate to use for digital data
- ▶ “2 foot accuracy” and “1 foot accuracy” terms are still WIDELY used

### NSSDA - 1998

- ▶ Applies to raster, point or vector data
- ▶ Must compare your data against a “reference”
- ▶ Reference must be 3x more accurate
- ▶ RMSE vs 95% Accuracy

# Standards

## More Recent (relevant) History

2003 FEMA Appendix A: Guidance for Aerial Mapping and Surveying of the Guidelines and Specifications for Flood Hazard Mapping Partners

2004 NDEP Guidelines for Digital Elevation Data

2009 USGS Base Lidar Specification for projects funded under ARRA

2010 Procedure Memorandum No. 61 - Standards for Lidar and Other High Quality Digital Topography

2012 USGS LiDAR Base Specification Version 1.0 (NGP)

2012 USGS National Enhanced Elevation Data Assessment

2014 ASPRS Accuracy Standards for Digital Geospatial Data

# Standards

## NSSDA vs NMAS

- ▶ NMAS Contour Interval =  $3.2898 \times \text{RMSE}(z)$
- ▶ NMAS Contour Interval =  $\text{Accuracy}(z) / 0.5958$

Note that Accuracy ( z ) is based on 95% CI, a statistical calculation.

NMAS Equivalent Contour Interval (in feet)	NSSDA RMSE(z)	NSSDA Accuracy(z)	Required Accuracy for Reference Data for "Tested to Meet"
0.5	0.15 ft or 4.60 cm	0.30 ft or 9.10 cm	0.10 ft
1	0.30 ft or 9.25 cm	0.60 ft or 18.2 cm	0.20 ft
2	0.61 ft or 18.5 cm	1.19 ft or 36.3 cm	0.40 ft
4	1.22 ft or 37.0 cm	2.38 ft or 72.6 cm	0.79 ft
5	1.52 ft or 46.3 cm	2.98 ft or 90.8 cm	0.99 ft
10	3.04 ft or 92.7 cm	5.96 ft or 181.6 cm	1.98 ft

The fourth column in this table refers to the NSSDA Accuracy required for Reference Data or Checkpoints to be used in assessing data Accuracy

# Standards

TABLE B.8 VERTICAL ACCURACY OF THE NEW ASPRS 2014 STANDARD  
COMPARED WITH LEGACY STANDARDS

Vertical Accuracy Class	RMSE <sub>z</sub> Non-Vegetated (cm)	Equivalent Class 1 contour interval per ASPRS 1990 (cm)	Equivalent Class 2 contour interval per ASPRS 1990 (cm)	Equivalent contour interval per NMAS (cm)
1-cm	1.0	3.0	1.5	3.29
2.5-cm	2.5	7.5	3.8	8.22
5-cm	5.0	15.0	7.5	16.45
10-cm	10.0	30.0	15.0	32.90
15-cm	15.0	45.0	22.5	49.35
20-cm	20.0	60.0	30.0	65.80
33.3-cm	33.3	99.9	50.0	109.55
66.7-cm	66.7	200.1	100.1	219.43
100-cm	100.0	300.0	150.0	328.98
333.3-cm	333.3	999.9	500.0	1096.49

# Standards

## Surface Modeling from Point Clouds

- ▶ FEMA- NPS should be equal to or less than the DEM post spacing (resolution) required
- ▶ 1-meter DEM for 1ft contours
- ▶ 2-meter DEM for 2ft contours
- ▶ 5-meter DEM for 5ft contours
- ▶ 0.7 NPS -> 1m DEM -> 1ft contours (QL 2)
- ▶ 1.4 NPS -> 2m DEM -> 2 ft contours (QL 3)

Note: Higher density data may still fail vertical RMSE test

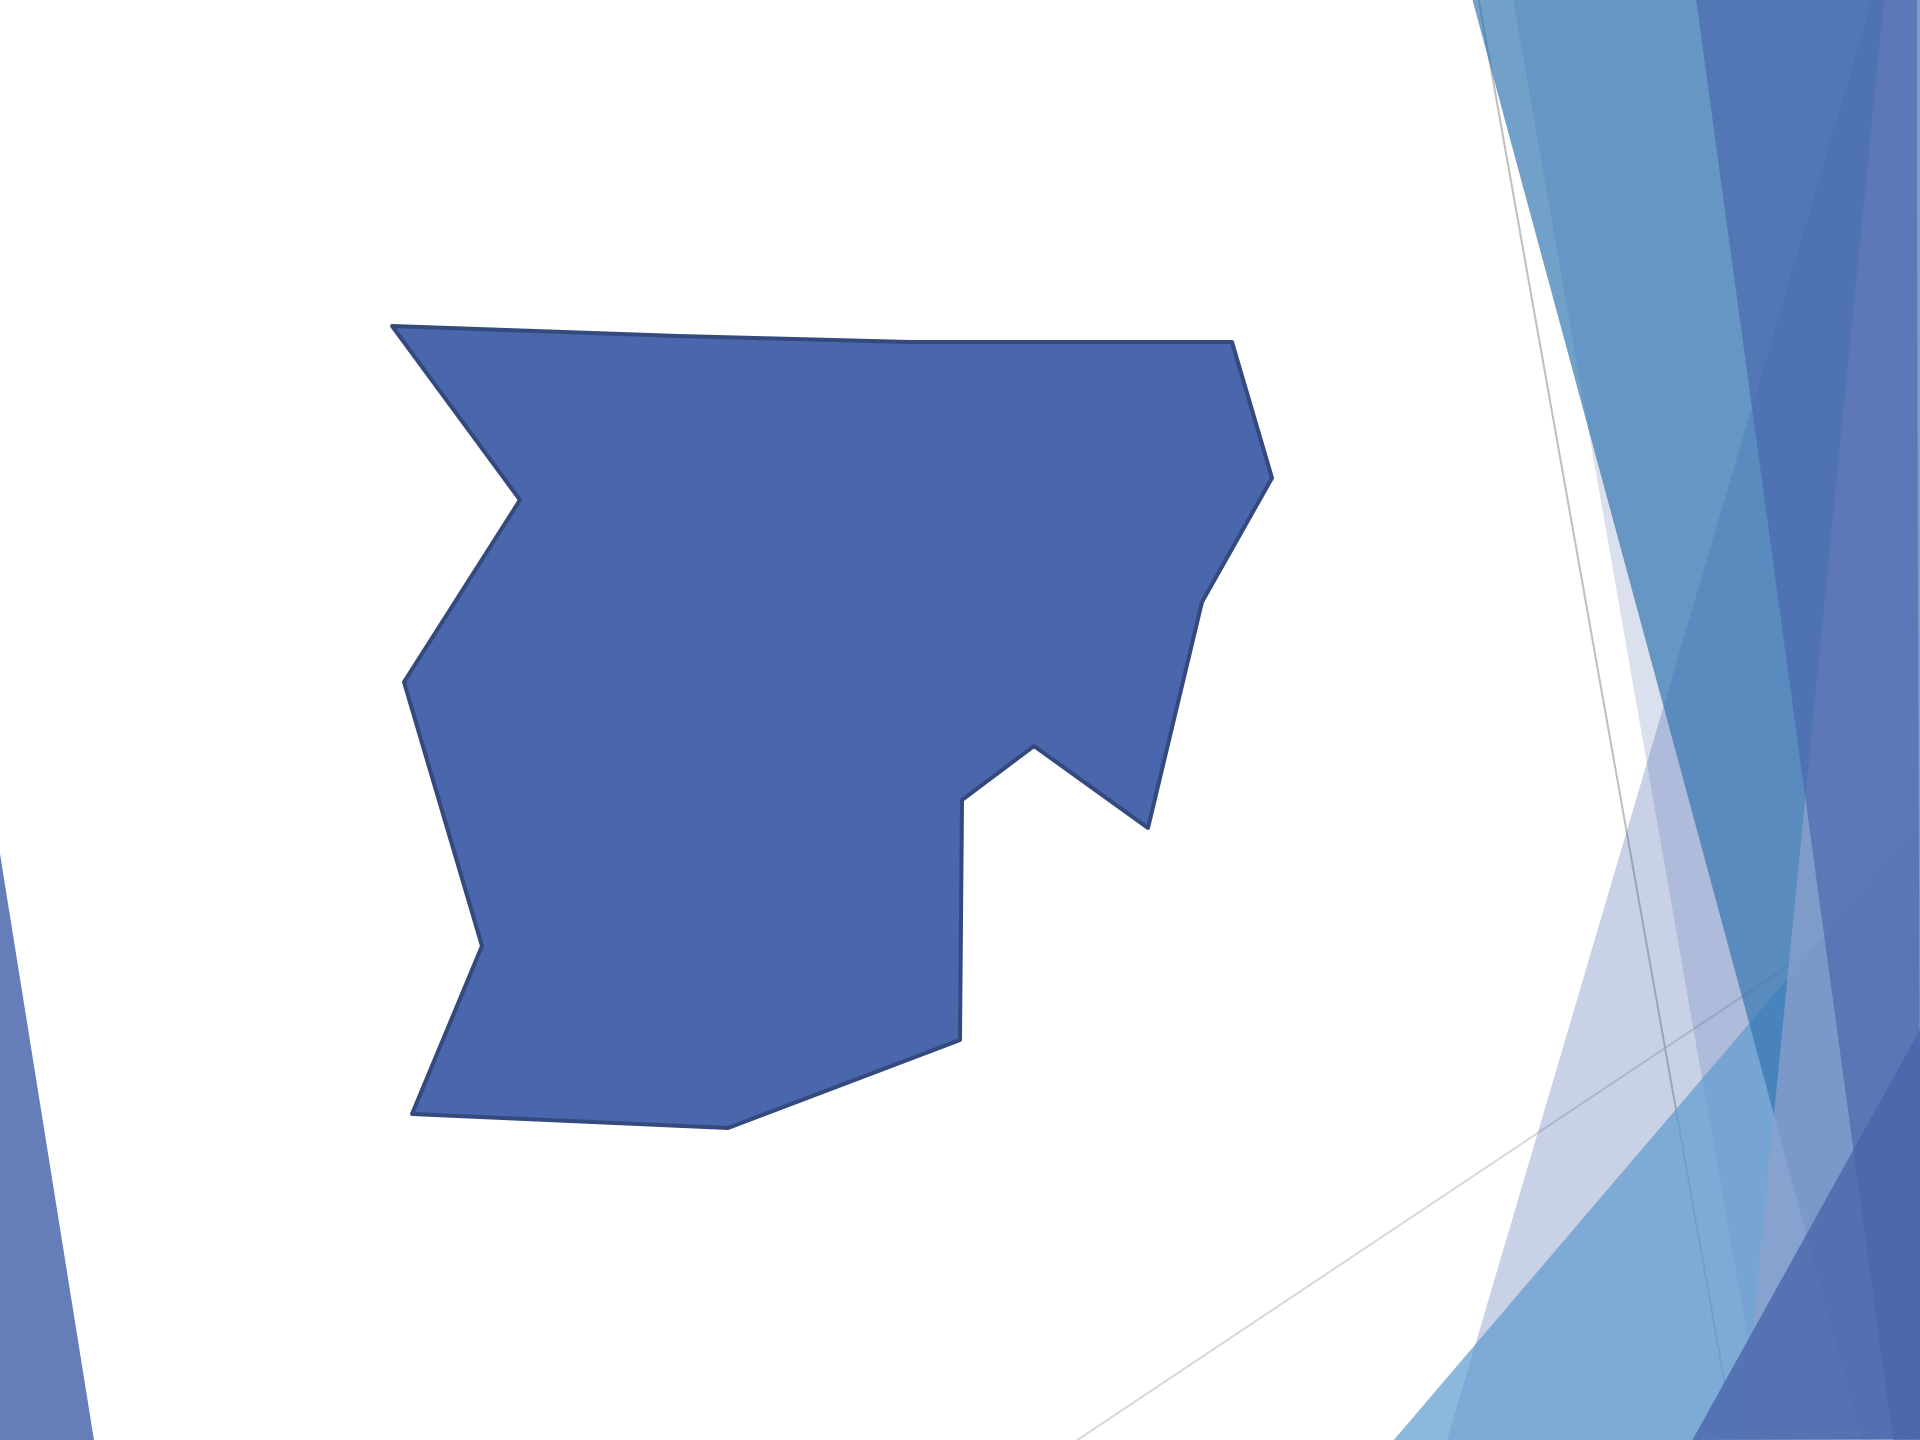

Lower density data may meet higher accuracy tests.

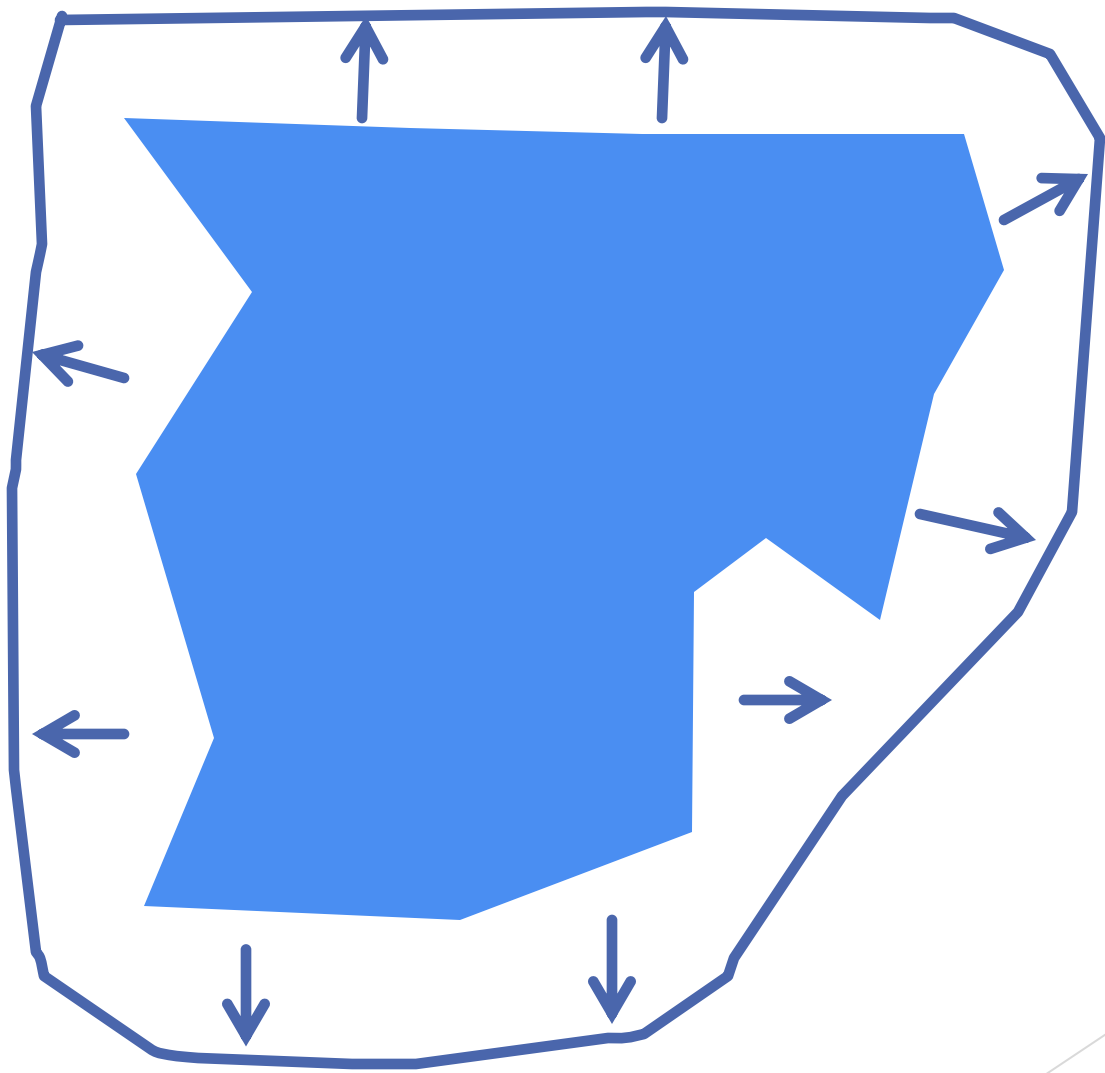

Accuracy is tested from a sample of points against the surface model, regardless of the point cloud density

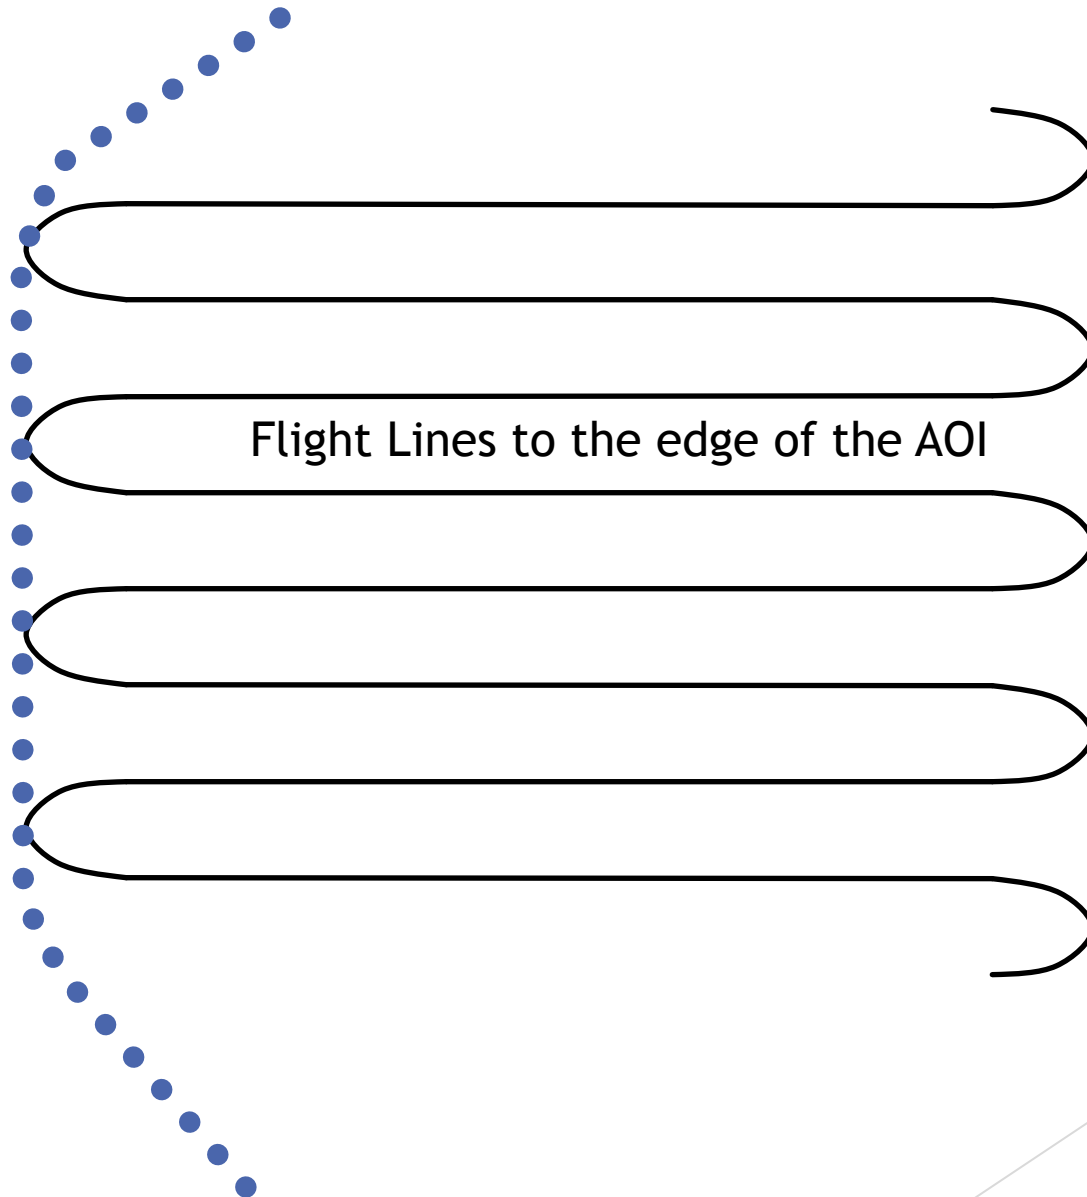

# Standards

TABLE B.6 HORIZONTAL ACCURACY/QUALITY EXAMPLES FOR HIGH ACCURACY DIGITAL PLANIMETRIC DATA

ASPRS 2014				Equivalent to map scale in		Equivalent to map scale in NMAS
Horizontal Accuracy Class RMSE <sub>x</sub> and RMSE <sub>y</sub> (cm)	RMSE <sub>r</sub> (cm)	Horizontal Accuracy at the 95% Confidence Level (cm)	Approximate GSD of Source Imagery (cm)	ASPRS 1990 Class 1	ASPRS 1990 Class 2

17.5	24.7	42.8	8.8 to 17.5	1:700	1:350	1:444
20.0	28.3	49.0	10.0 to 20.0	1:800	1:400	1:507
22.5	31.8	55.1	11.3 to 22.5	1:900	1:450	1:570
25.0	35.4	61.2	12.5 to 25.0	1:1000	1:500	1:634
27.5	38.9	67.3	13.8 to 27.5	1:1100	1:550	1:697
30.0	42.4	73.4	15.0 to 30.0	1:1200	1:600	1:760
45.0	63.6	110.1	22.5 to 45.0	1:1800	1:900	1:1,141

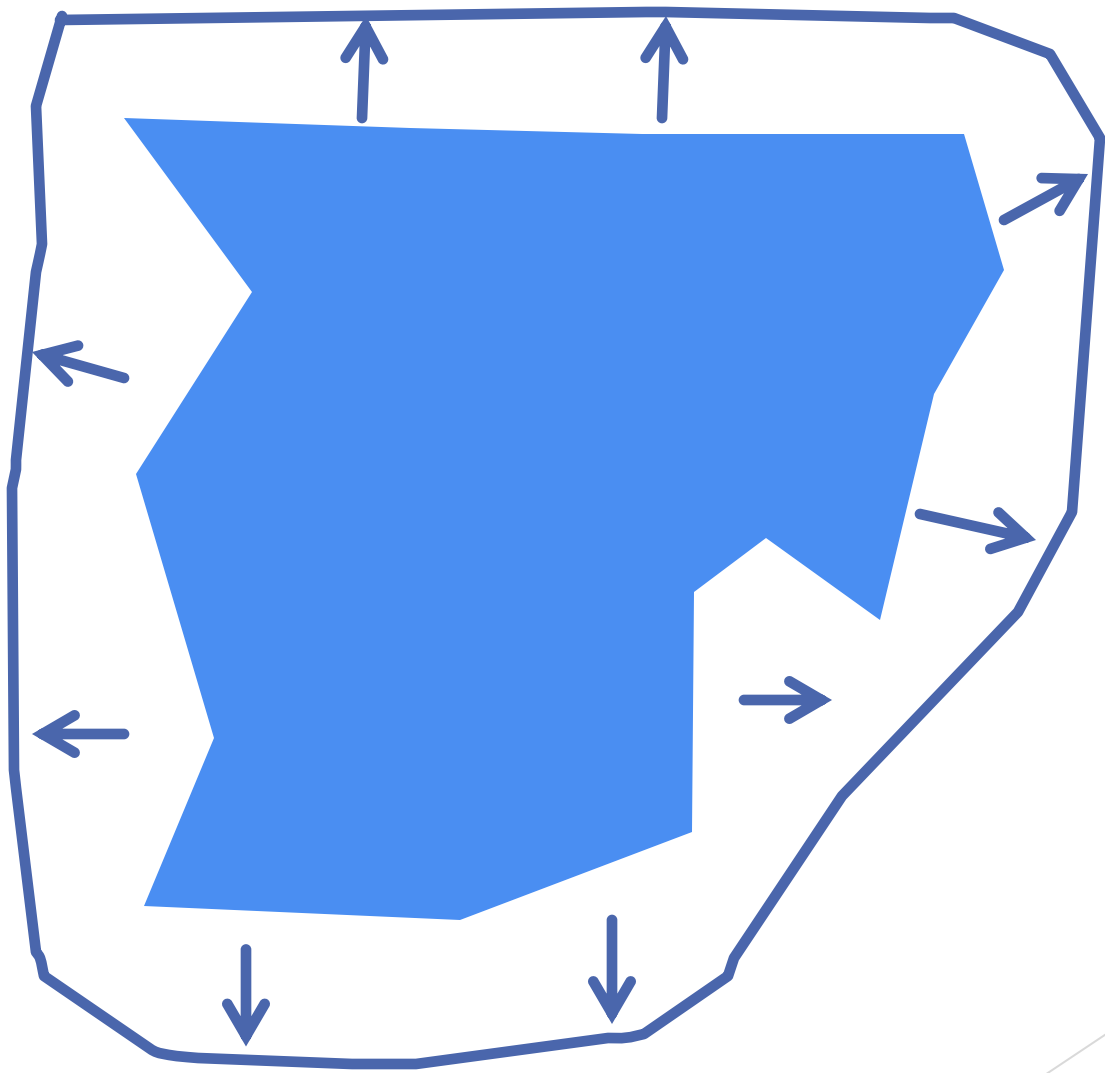

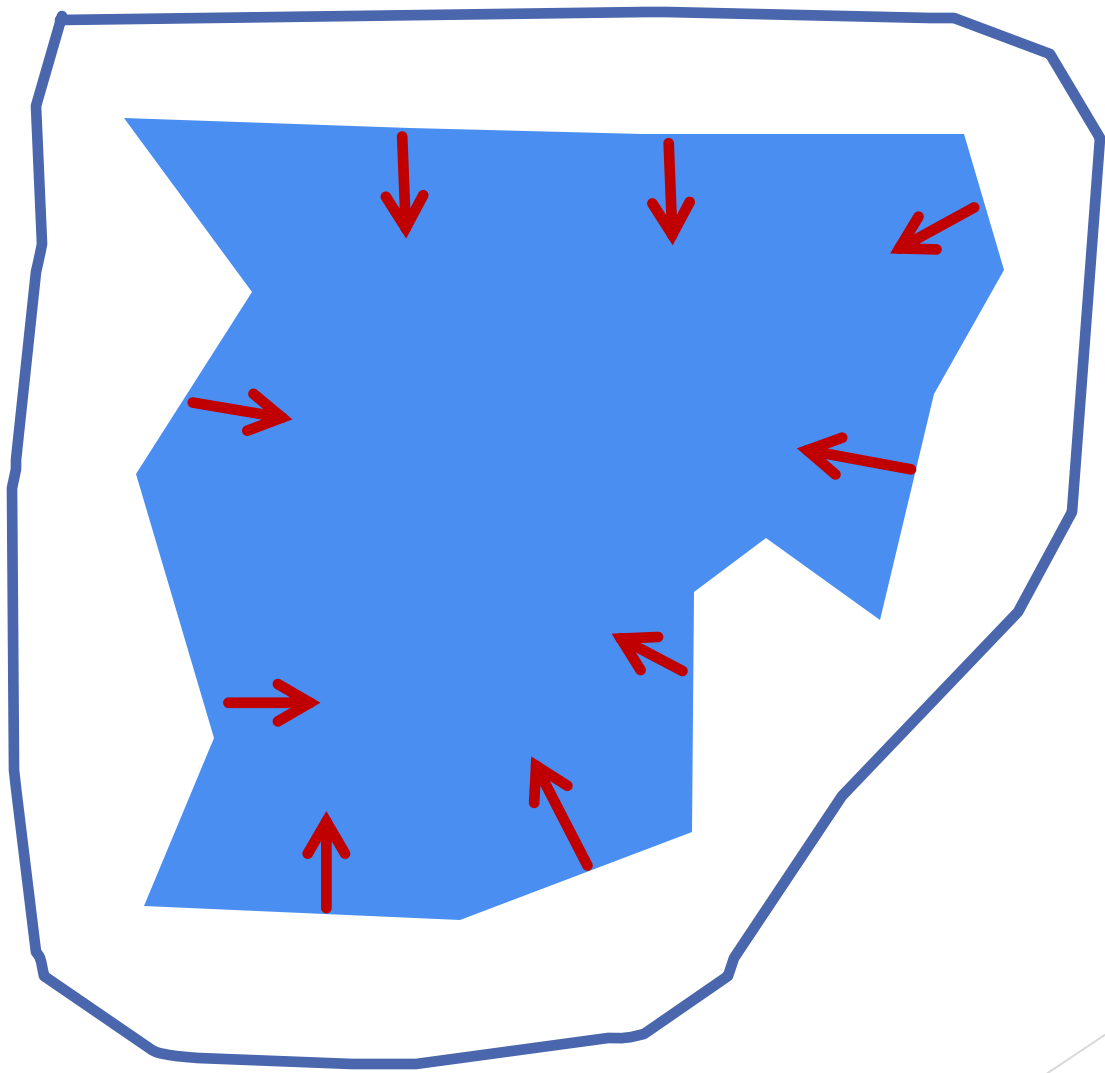

Flight Lines to the edge of the AOI

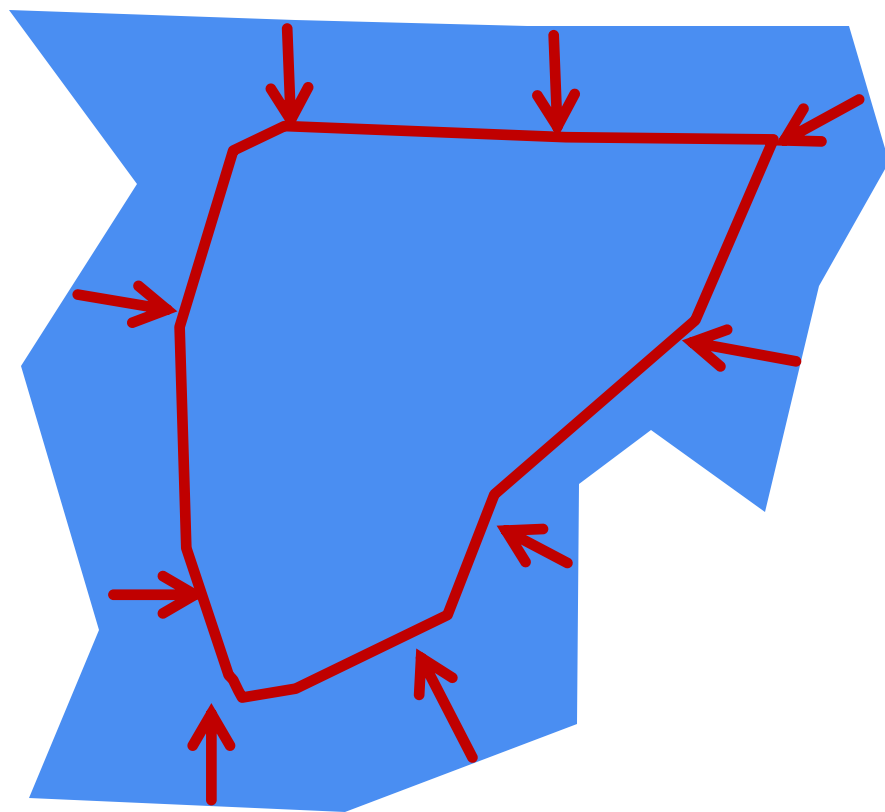

Flight Lines beyond the AOI

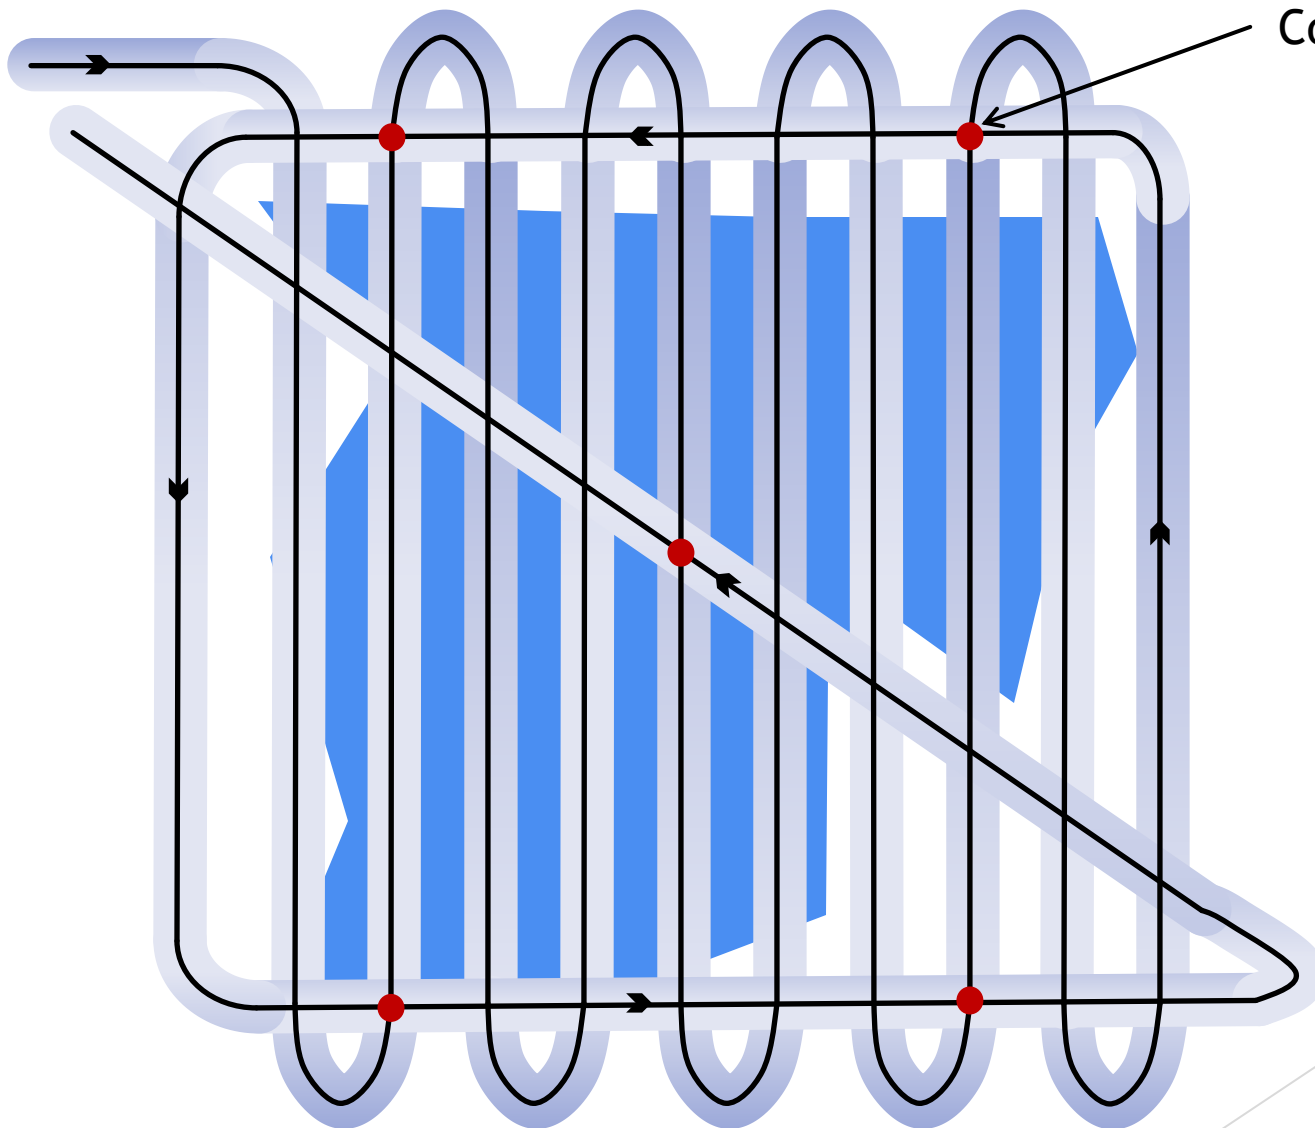

The diagram illustrates a flight path that zig-zags horizontally across the frame, with each horizontal segment having rounded ends. A series of blue dots traces the path, showing a slight upward curve at the top and a slight downward curve at the bottom, indicating a sweep pattern. The text 'Flight Lines beyond the AOI' is centered within the horizontal segments.

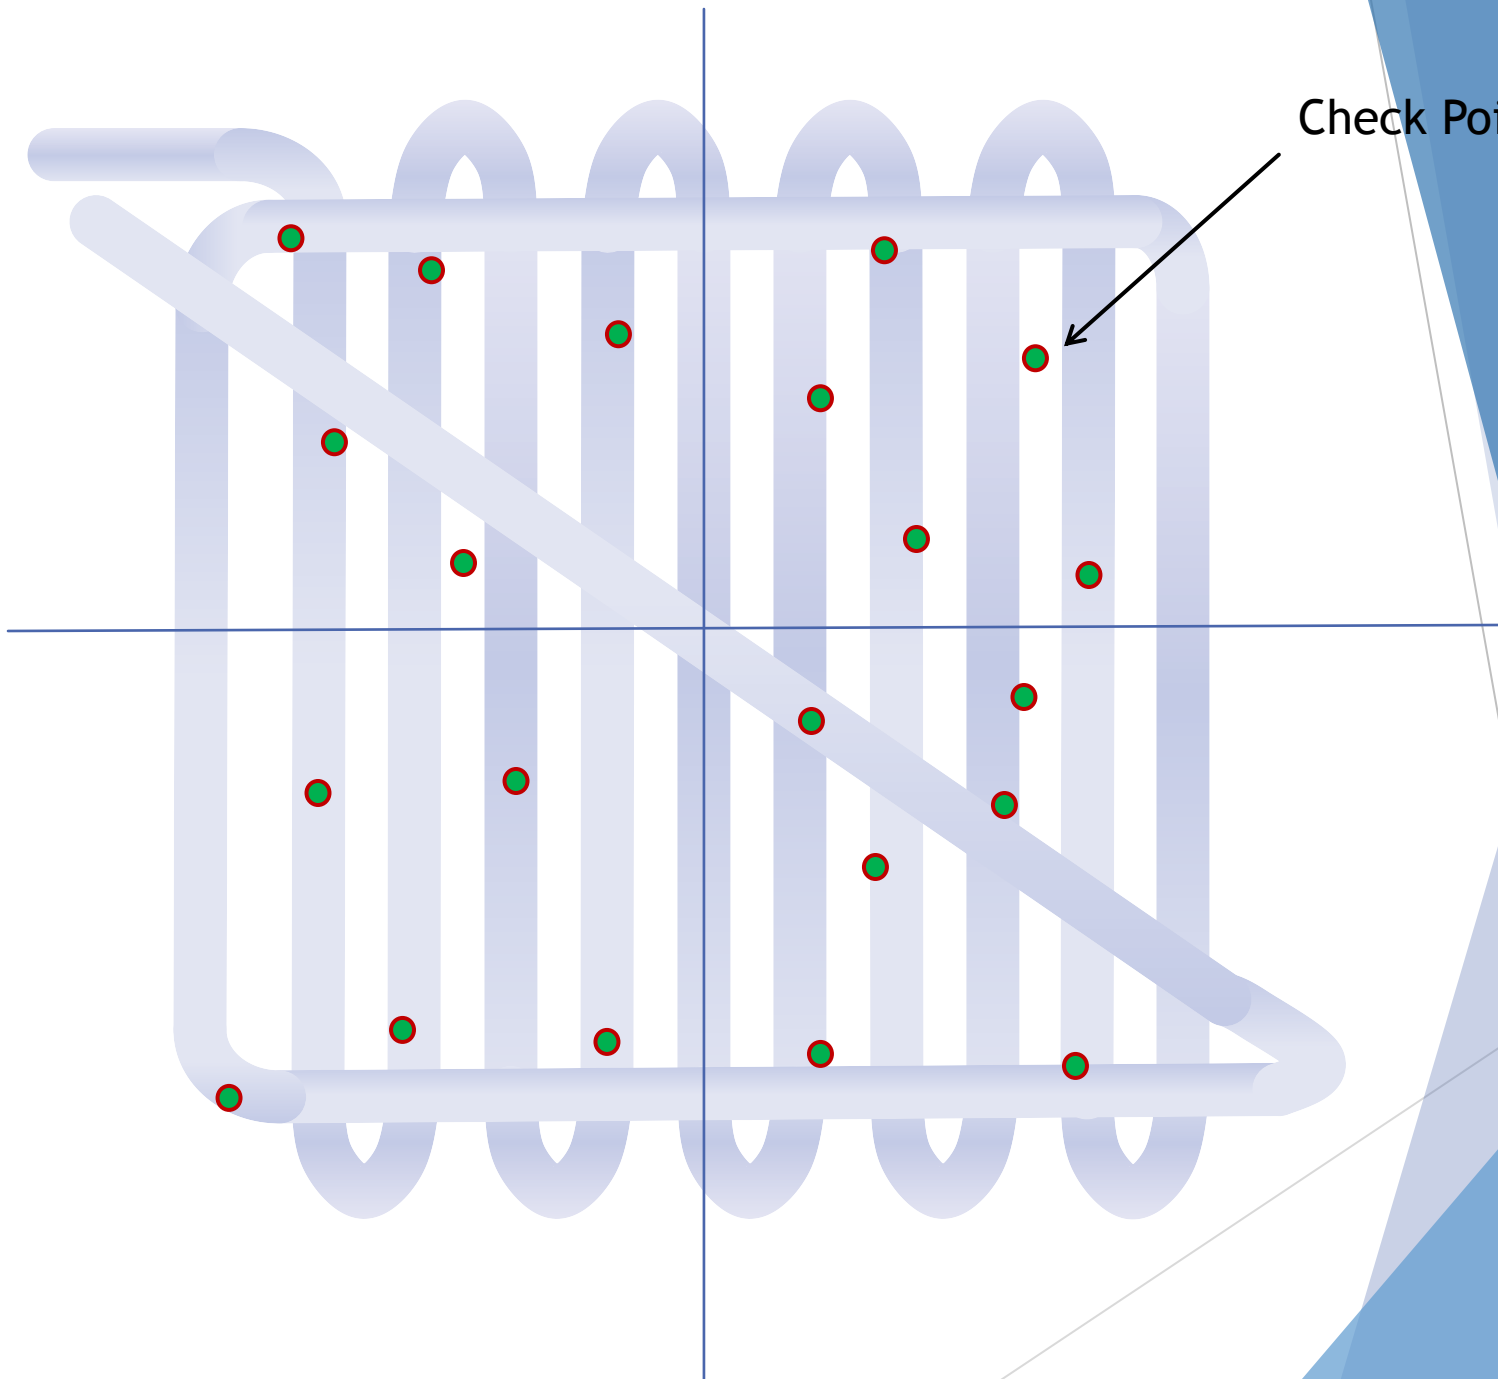

Control Points

Check Points

# GCP Planning

- GCPs control the accuracy
- Re-use existing known control when possible
- USE A SURVEYOR IF THE JOB REQUIRES IT
- The GCP layout and the flight plan done together.
- Put GCPs in overlap areas and isolated areas
- GCP persistence-Adapt your plan over time
- Augment in areas of low confidence or obscured
- Get a report, not just a text file with XYZ coordinates

# GCP Planning

- Use an appropriate target
- Include KMZ/ASCII/Shape
- Need to be visible, recoverable, numbered.
- Be Practical!

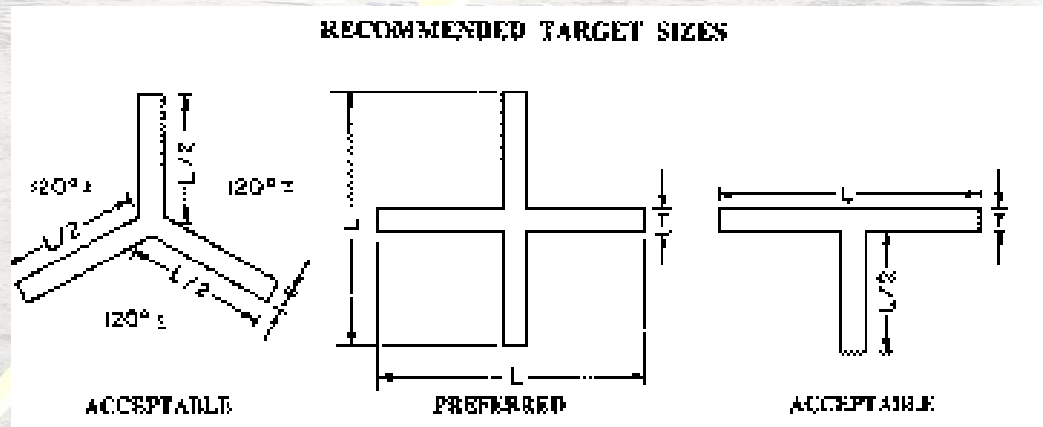

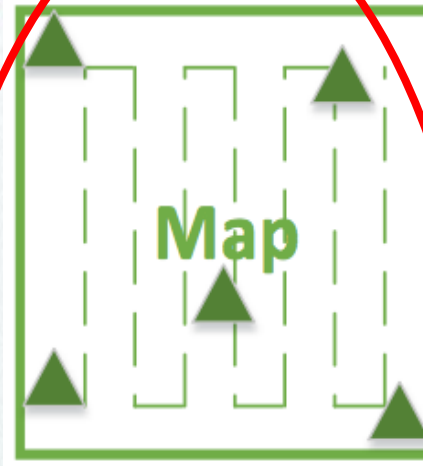

Photo. Scale	Thickness of Leg (T)	Length of Legs (L)
1:1800	6 Inches(150mm)	3 Feet(0.9m)
1:2400	6 Inches(150mm)	3 Feet(0.9m)
1:3000	6 Inches(150mm)	4 Feet(1.2m)
1:3600	6 Inches(150mm)	4 Feet(1.2m)
1:4200	6 Inches(150mm)	5 Feet(1.5m)
